Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mouri et al. (4642247) in view of Sadasivan (6419356).

Mouri et al. disclose a recording medium comprising a support with upper and under layers on its surface (see the abstract). The underlayer may comprise multiple water soluble or hydrophilic resins including cationic resins (see col. 6, lines 11-28) and it would have been obvious to use more than one of these materials as suggested by the reference. The upper layer may include polyester resin (see col. 7, lines 38-49, col. 9, lines 48-62). Additionally, the layers may include defoaming agents and surfactants (see col. 14, lines 24-21). The reference does not disclose the particulars of these additives.

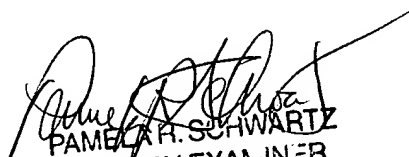

Sadasivan et al. teach that addition of surfactants of HLB of less than about 10 will substantially prevent foaming in coating layers of ink jet recording elements (see the abstract and col. 2, lines 30-42). Based upon this disclosure, it would have been obvious to one of ordinary skill in the art to include a surfactant of HLB of less than about 10 in the coating layers of the primary reference for their function as defoaming agents.
